DETAILED ACTION

1. This Office Action is in response to the amendment filed 12/14/06. Claims 1, 3-9, 11-16, 21 and 22 are pending. Currently no claims are in condition for allowance.

Claim Rejections - 35 USC § 101

2. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 1, 3-9, 11-16, 21 and 22 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. The claims recite "*a network element switch... mapping of signals between nodes.... based on comparison of a number of signals between each of the input nodes and center nodes and... between each of the center nodes and the output nodes... (Regarding to claims 1 and 9),*

or

selecting the mapping... the difference in the number of signal between each of the input nodes and center nodes is minimized and the difference in the number of signal between each of the center nodes and the output nodes is minimized (Regarding to claim 21), " which are directed to mathematical operations without being limited to a practical application.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Art Unit: 2616

4. Claims 1, 3-9, 11-16, 21 and 22 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. Claims 1, 9 and 21 recite a method and an apparatus for mapping signals between nodes based on a **comparison** of a number of signal between each of input, center and output nodes. The specification offers no teaching of a physical embodiment for the device that is intended to perform the “**comparison**”. Fig. 6D is the only figure that is intended to describe a table that illustrates the affects of different configurations. Furthermore, the specification nowhere describes how and where the comparison is carried out.

Response to Arguments

5. Applicant's arguments with respect to claims 1, 3-9, 11-16, 21 and 22 have been considered but are moot in view of the new ground(s) of rejection.
